

FLEA TREATMENT

BEFORE WE TREAT:

- Except for furniture, clear everything off the floor, even in the closets.
- Vacuum the floor, the baseboards and any area where your animals sit or sleep, including the couch, chairs, counters or windowsills. After a thorough vacuuming, remove the bag, seal it in a plastic bag, and put it in the outside trash.
- Wash the floors. If your carpets need cleaning, do it before the treatment, or 3 months after the treatment. We recommend **Carpet Solutions** at 1-800-287-0002 www.thecarpetsolution.com
- Wash all bedding – including pet beds, but don't remake the beds until after the treatment.
- Remove pets. Have your pets dipped while the house is being treated, and plan to bring them back at the end of the day. If you have a fish tank, cover it and unplug the filter until you are back in the house. A pet on a medication such as "Program" cannot return to the house for 24 hours after treatment.

AFTER WE TREAT:

- Surfaces must be completely dry before you walk on them or allow children to play on them.
- Estimate being out of your house for 3 to 4 hours after treatment.
- Ventilate the house when you return.
- Vacuum the day after the treatment, and as often as possible during the next month, but don't wash the floors for three days after the treatment.
- Make sure your pet has ongoing flea prevention – a collar, drops, etc.

WHAT TO EXPECT:

- The insecticide will last for up to 7 months if it is not removed.
- You will still see fleas after the treatment, and occasionally an adult will be seen for up to 90 days.
 - The treatment cannot reach the cocoon stage of the flea.
 - When it reaches adulthood, it will come into contact with the insecticide.
 - The newly emerged adult flea will die within 1 to 3 days.

For our treatment to be successful, you need to do the preparation and follow-up!
